Bank Marketing Campaign Analysis

A decision brief for campaign follow-up

Which customers should receive priority contact, and how should the bank review repeated follow-up?

Evidence from 4,521 customer records

Guided Excel portfolio project

Data and validation

Records	Subscriptions	Conversion	Reported contacts
4,521	521	11.52%	12,630

Excel analysis

Data audit and documented special values
Helper columns and seven PivotTables
Dashboard with contact and housing slicers

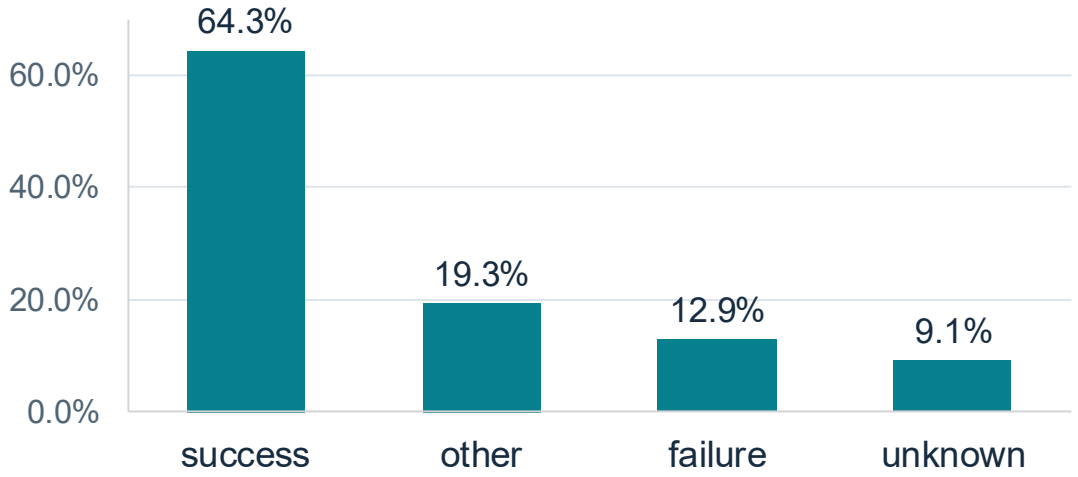

Accuracy checks

Source totals reconcile with pivot totals
Independent COUNTIFS and SUMIFS check
Four dashboard filter tests passed

Conversion = subscriptions ÷ records. Unknown categories remain visible.

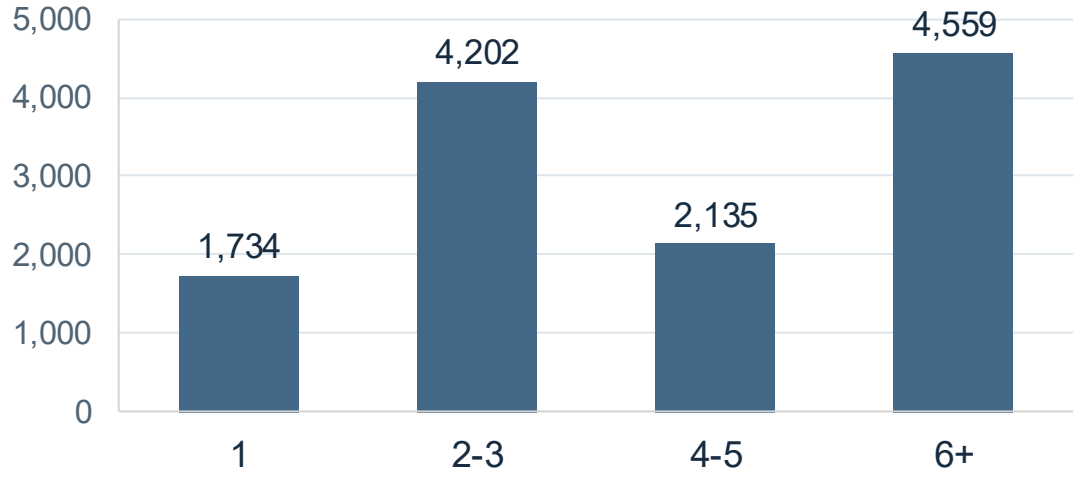

Prior success and repeated contact stand out

Conversion by previous outcome

Outcome	Records	Subscriptions
success	129	83
other	197	38
failure	490	63
unknown	3,705	337

Reported contacts by contact band

6+ contacts

36.10% of contact activity
6.53% of subscriptions
7.19% conversion

Previous success: 5.58× overall conversion, but only 2.85% of records.

Recommendations for controlled tests

Prior-success follow-up

Proposed owner: Campaign manager

Test a defined follow-up approach against current practice.

Repeated-contact review

Proposed owner: Contact-centre manager

Test a pause or lower-frequency approach for eligible customers.

Channel recording

Proposed owner: CRM data-quality lead

Audit unknown records and pilot improved channel capture.

Channel evidence: 29.29% unknown. Telephone and cellular convert at 14.62% and 14.36% overall, but their ranking differs by housing-loan status.

Limits and the next pilot

What the evidence cannot establish

Historical associations do not prove causation.

Small groups and pooled months limit interpretation.

Costs, deposit values, margin and retention are missing.

Proposed controlled pilot

Eligible customers remain unsubscribed after three attempts.

Randomly assign current or revised follow-up.

Compare conversion, additional contacts and complaints over 30 days.

A power calculation and agreed decision thresholds come before sample size.
